

To install the Economy Cable Lock Kit:

- Determine a secure fixture which you can wrap the security cable around or through. Be sure this point is close enough so the security cable can reach your device's security slot.

- Suggested secure fixture:

- A cable pass-through hole in the top of the desk (see photo 1)
- The portion of a table leg between the supporting cross bar and the table top
- An attached Desktop Anchor Point (see SecurTech item: DAP)

- Wrap the cable around the secure fixture and pass one end of the cable through the loop in the other end of the cable. Pull it all the way through until it is snug.

- Spread the Scissor Clip open so that the overlapping tip will fit into the device's universal security slot (see photo 2). Close the scissor clip so the tip spreads out inside the security slot.

- Slip the Scissor Clip Insert all the way into the slot in the middle of the scissor clip (see photo 3)

- Confirm that the Scissor Clip connection to the security slot is firmly secure.

- Lock the padlock through both the cable end-loop and the Scissor Clip Insert (see photo 4)

CAUTION: Always use the Scissor Clip Insert together with the Scissor Clip to ensure the most secure connection to the universal security slot.

Thank you for choosing SecurTech.
