

Application Instructions KeepTabs model RA2

Before you begin: It is important to understand that there are two types of adhesive that are used for specific KeepTabs applications:

- 1) Close Bond Adhesive (CBA): This is a liquid adhesive that is used for assembling KeepTabs anchors. It is also used for attaching the anchors permanently to equipment with flat surfaces only.
- 2) Silicon Adhesive (SRA): This is a rubber adhesive that is used for temporary mounting of KeepTabs anchors on equipment with flat, irregular or slightly curved surfaces.

To assemble KeepTabs anchors and cables:

- To assemble a cable with a KeepTabs anchor at each end, choose one cable and two of each type of anchor pieces.
- Press the cable snugly into the appropriate cable trough. Be certain the cable is pressed down flush and leave a 1/16" space at tip.
- Apply Close Bond Adhesive over the cable in the trough and on the other high points on anchor. Adhesive should coat top of cable and seep down, which adheres it to the anchor body. Note: The adhesive is moisture activated and in dry environments it may be helpful to blow on wet adhesive surface before assembly and mounting.
- Immediately press the cover tightly in place and hold firmly for one minute. Wipe away any excess adhesive that oozes from the edges. Bend the cable at the base of the anchor to straighten.

To install KeepTabs anchors on equipment with CBA (permanent adhesion):

- Select the best location to mount the anchor on your device. Anchors are best applied when mounting surface is horizontal.
- Wipe gluing surface clean. Apply a liberal bead of adhesive in a Z pattern across the anchor. Note: Adhesive is moisture activated. In dry environments it may be helpful to lightly blow on wet adhesive.
- Press anchor firmly against the device without twisting for 30 seconds to make sure a solid bond is formed. It is normal for some adhesive to ooze out the sides. Wipe away any excess adhesive with a tissue.
- Allow several hours to set. Maximum bond is achieved after 24 hours. Once set, the anchor cannot be removed or adjusted.

To install KeepTabs anchors on equipment with SRA (temporary attachment):

- Select the best location to mount the anchor on your device. Wipe gluing surface clean.
- Apply a liberal bead of adhesive in a Z pattern across the anchor.
- Press anchor firmly against the device without twisting for one minute. Wipe away any excess adhesive with a tissue.
- Allow 24 hours for adhesive to fully set.
- KeepTabs anchors that are attached with SRA adhesive can be removed for re-use with the proper tools without harming the equipment surface.

CAUTION: Avoid getting adhesive on skin, in eyes or on clothes. Keep out of the reach of children. Use with care.

Thank you for choosing the Spot Anchor.
